

# Project H.A.N.D.

(Handy Appendage for Nonlocal Distances)

## The Handymen

(Collin MacDicken & Jonathan Kornich)

**FINAL PRESENTATION**

# Background

- Emo Todorov at University of Washington
  - 20 degrees of freedom
  - also controlled by a glove
  - 4 papers written on his project

# What is H.A.N.D.?

- Robotic hand controlled remotely via a user worn glove.
  - 5 degrees of freedom
  - Wireless communication
  - 3 modes of operation
  
- Applications
  - Manipulate objects from a remote location.
  - Cheap alternative for prosthetic hand (with different interface).
  - Automation for menial tasks requiring human hand-like dexterity.
  - Home entertainment device.

# Modes

**Real Time Mimicry:** Mimic user's finger movements in real time.

**Rock-Paper-Scissors:** Gloved user plays against robotic hand.

**Screensaver:** Iterates through pre-defined motions (for use on a mantle).

# GLOVE

RECHARGEABLE BATTERY (LIPO 9V)

REGULATOR

3.3V

FLEX SENSORS  
(4.5")

5V

3.3V

ADC

MICROCONTROLLER  
(TIVA C SERIES)

TRANSCEIVER  
(XBEE)

UART

# BASE

AC OUTLET (120 V)

DC CONVERTER

3.3V

5V

INTERFACE  
TEXT LCD  
(2X16)

SERVO  
MOTORS

3.3V

5V

TRANSCEIVER  
(XBEE)

UART

PWM

MICROCONTROLLER  
(TIVA C SERIES)

# Glove

# Power Consumption (Glove)

- WORST CASE current consumption
  - Tiva: 50mA
  - XBee (Transmitting): 33mA
  - GPIO / Flex Sensors: ~25mA
  - TOTAL: ~108mA
- Batteries: 600mA hr
- Expected battery life: ~6 hours.

# Power Consumption (Base)

- WORST CASE current consumption
  - Tiva: 50mA
  - Servos (with load): 450mA x5 = 2250mA
  - XBee (receiving): 28mA
  - LCD: 30mA
  - Rotary encoder: ~5mA
  - TOTAL: ~2363mA
- Power supply: 2.4mA
- Expected life (wall plug):  $\infty$

# Base CAD

## Base CAD (cont.)

# Going Forward

Implement mode 3: **Recorded Mimicry**.

Add a **battery powered** option for base.

3D print and **utilize team-designed** base and hand.

# Conclusion

Robotic hand controlled wirelessly via a user worn glove.

Features 3 modes of operation.

Applications as a device to manipulate objects from a remote location, or as a cheap alternative to prosthetic hands.

# Acknowledgements

Professor **Christian Hassard** for supervising the project.

Upperclassman **Cody Anderson** for many good ideas.

Thank you!
